

When to Involve a Professional Administrator

A professional administrator provides support, savings, and security for injured parties after they settle their future medical case. A professional administrator ensures injured parties are compliant with the Centers for Medicare and Medicaid Services, preventing them from jeopardizing their future Medicare benefits.

To identify cases and injured parties that might benefit from Ametros' services, look for the following within your case load.

Your client:

- Is worried the settlement money isn't enough and will run out too quickly
- Wants to settle their case, but has MSA reporting concerns
- Wants help managing their funds after settlement
- Wants to pay less than full price for their medical care
- Is worried about their different benefits and how to coordinate them
- Is worried about losing the support from their attorney
- Has had utilization review and denied treatments
- Is receiving monthly prescriptions or treatments
- Has reached Maximum Medical Improvement (MMI)
